Summary

Results-driven B.Tech Data Science graduate (2025, CGPA: 8.75/10) with hands-on experience in building machine learning models, data automation tools, and cloud-based solutions. Achieved 95%+ model accuracy during a 3-month Data Science internship processing 10,000+ security records using Python and SQL. Developed 3+ end-to-end projects cutting manual reporting effort by up to 60%. Strong interest in solving real-world business problems using data-driven insights and scalable ML solutions. Actively seeking entry-level Data Analyst / AI-ML roles.

Technical Skills

Programming & Data Analysis: Python (Pandas, NumPy, Scikit-learn), SQL, Linux

Machine Learning & AI: Supervised & Unsupervised Learning, NLP, Sentiment Analysis, Feature Engineering

Data Visualization & Reporting: Power BI, Excel, Matplotlib, Seaborn

Cloud & DevOps: AWS (EC2, S3, ELB), Docker, Git, GitHub

Soft Skills: Communication, Analytical Thinking, Problem Solving

Internship

Codtech IT Solutions

Data Science Intern

Mar 2025 – Jun 2025

- Cleaned and preprocessed 10,000+ security event records using Python (Pandas, NumPy) and SQL, eliminating 30% data inconsistencies and saving 4 hrs/week of manual work.
- Developed ML models for anomaly detection and vulnerability assessment, achieving **95% detection accuracy** via cross-validation and confusion matrix analysis.
- Automated EDA reporting across 6 security metric dimensions, reducing manual analysis time by 50% per sprint; delivered visualizations to support system security improvements.

Projects

Cloud-Based Sales Analytics Pipeline | *Python, Pandas, AWS S3, AWS EC2, Docker, Git*

- Architected end-to-end cloud data pipeline ingesting 50,000+ rows into Amazon S3 and processing on Amazon EC2, cutting manual reporting time by ~60% (~8 hrs/week saved).
- Developed a Dockerized Python ETL application for automated sales analysis across 8 product categories, reducing data errors by 35% and standardizing 12 calculated fields.
- Generated business KPIs (total revenue, profit margins, category performance), surfacing 3 underperforming segments that directly informed pricing strategy decisions.
- Implemented modular, Git-versioned scripts ensuring 100% reproducible workflows across dev and prod environments.

AI-Powered Customer Support Chatbot | *Python, NLP, Tkinter, Scikit-learn, TF-IDF*

- Designed context-aware chatbot with sentiment analysis and intent classification achieving **87% accuracy** on a 500-sample test set across 15+ query categories.
- Built complete ML pipeline: text preprocessing → tokenization → TF-IDF feature extraction → model training, reducing average query resolution time by 40%.
- Delivered GUI-based desktop application using Tkinter with <1.5s response time, handling ~200 simulated queries through automated response generation.

Education

Ajeenkya D Y Patil University

B.Tech in Data Science | CGPA: 8.75

2021 – 2025

Peoples Junior College

HSC (Science – PCM) | Percentage: 83.33%

Certifications

- Database and SQL for Data Science – Infosys Springboard
- Python Programming – Infosys Springboard
- Data Visualization – Infosys Springboard
- NextGen Technology – Infosys Springboard
